Team ID	SWTID-2026-9374
Project Name	Import Data using Transform Maps
Maximum Marks	2 Marks

Customer Problem Statement Template:

HR and data administrators need to import employee spreadsheets into ServiceNow accurately. The problem is to maintain the five employee fields while reducing manual entry, updating existing records and avoiding duplicate employees.

The workflow uses Employee Import as the staging table, a Transform Map to map fields, and Employee Test as the target table. Employee ID coalesce supports record matching. Transform History and target records are checked before Department, Location and Employee List reports are added to the dashboard.

I am	Describe customer with 3-4 key characteristics - *who are they?*	An employee data administrator managing spreadsheets in ServiceNow
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	Import five employee fields accurately and update existing records
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Manual entry and repeated uploads can create incorrect or duplicate records
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Source fields need correct mapping and existing employees need ID matching
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Concerned about accuracy and the time spent correcting employee data

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel

PS-1	Employee data administrator	Import and update employee records	Manual entry and repeat uploads risk errors or duplicates	Fields need correct mapping and Employee ID matching	Concerned about data accuracy
PS-2	HR administrator	View employee details by department and location	Separate records are difficult to review quickly	Reports and a shared dashboard are needed	Delayed when preparing HR summaries
